**FOR IMMEDIATE RELEASE**

**Sauereisen Chemist Awarded Top Publication**

Pittsburgh, January 31, 2006 — Sauereisen, Inc., a third-generation manufacturer of chemically resistant materials, is proud to announce that Gary R. Hall, Manager of Organic Technology, has received national recognition in the field of corrosion.

The Society for Protective Coatings (SSPC), selected Mr. Hall's article regarding municipal infrastructure as its 2006 Outstanding Publication. The title of the article was "Out of Sight, Out of Mind, and Often Out of Order: The Problems with Protecting Wastewater Treatment Plants." The article originally appeared in the society's *Journal of Protective Coatings and Linings*.

Mr. Hall is primarily responsible for research and product development at Sauereisen where he has been employed for 37 years. A graduate of the University of Pittsburgh, he is active with the National Association of Corrosion Engineers, American Institute of Chemical Engineers and several industry committees. His areas of professional interest include concrete technology, corrosion science and specialty polymers.

The award was presented at the Paint and Coatings Expo (PACE) 2006 in Tampa, Fla., on January 29, 2006. Prior to his departure for the Expo, Mr. Hall's co-workers celebrated the achievement by presenting him with a cake decorated to illustrate the award-winning cover photo. Said Hall, "A cake depicting our nation's sewers hardly sounds appetizing, but neither is the prospect of allowing municipal infrastructure to crumble beneath our feet".

Established in 1899, Sauereisen offers worldwide distribution of products that protect concrete and steel from aggressive chemical and thermal environments in several industries.
