

# SAUEREISEN

## Air-Set Cements: Specified for their Great Bonding Properties

Sauereisen's line of inorganic high temperature cements includes several air-setting products that cure by the loss of moisture through water evaporation.

Sauereisen understands the challenges of adhesive applications. Typically our high temperature adhesive customers seek a long working time, consistent viscosity, and the ability to dispense material automatically.

Sauereisen's Air-Set Cements enable high volume production in 3 main ways:

1. Unlimited Pot Life - remains fluid prior to exposure
2. Stable Viscosity - available as a paste or a powder
3. Automation - compatible with most dispensing systems
