

# SAUEREISEN

## Ceramic Cements for Heating Elements

Heating elements represent one of the most common applications of Sauereisen cements. Sauereisen can be suitable to pot an entire cavity or seal the end caps of various heating element configurations.

High density and exacting raw material purity allow the Sauereisen potting compounds to exhibit impressive thermal conductivity so that heat gets to where it needs to be.

### Typical Applications

- Band Heaters
- Cartridge Heaters
- Radiant Heaters
- Quartz Heaters
- Panel Heaters
- Tubular Heaters

Heating elements sealed with Sauereisen offer longevity due to the material's electrical resistance.

*Through a century of consistent research,* innovation, and quality control, Sauereisen has developed a worldwide reputation as a leading manufacturer of specialty cements.
