## SewerGard™ Epoxy Systems

SewerGard Epoxy Systems are self-priming, moisture tolerant and are completely resistant to the micro-biologically induced corrosion (MIC) common to municipal wastewater applications, for both restoration new construction.

210T Trowelable • 210S Sprayable • 210RS Rotary Spray • 210G Glaze • 210FS Fast Set • 210X High-Strength

SewerGard is available in formulations which allow for versatile methods of application:

- Trowel
- Roll
- Plural Component Spray
- Airless Spray
- Rotary Spray

Each formulation of SewerGard provides an impermeable, high strength, corrosion-resistant lining for structures subject to infiltration and attack from hydrogen sulfide and acid generated by microbiological sources.

SewerGard can be used in various locations within the wastewater industry

- Manholes
- Lift stations
- Grit Chambers
- Tunnels
- Aeration Basins
- Clarifiers
- Digesters
- Wet Wells
